ALMATY, NAS RK

NAS RK is pleased to announce that News of NAS RK. Series of chemistry and technologies scientific journal has been accepted for indexing in the Emerging Sources Citation Index, a new edition of Web of Science. Content in this index is under consideration by Clarivate Analytics to be accepted in the Science Citation Index Expanded, the Social Sciences Citation Index, and the Arts & Humanities Citation Index. The quality and depth of content Web of Science offers to researchers, authors, publishers, and institutions sets it apart from other research databases. The inclusion of News of NAS RK. Series of chemistry and technologies in the Emerging Sources Citation Index demonstrates our dedication to providing the most relevant and influential content of chemical sciences to our community.

Қазақстан Республикасы Ұлттық ғылым академиясы "ҚР ҰҒА Хабарлары. Химия және технология сериясы" ғылыми журналының Web of Science-тің жаңаланған нұсқасы Emerging Sources Citation Index-те индекстелуге қабылданғанын хабарлайды. Бұл индекстелу барысында Clarivate Analytics компаниясы журналды одан әрі the Science Citation Index Expanded, the Social Sciences Citation Index және the Arts & Humanities Citation Index-ке қабылдау мәселесін қарастыруда. Web of Science зерттеушілер, авторлар, баспашылар мен мекемелерге контент тереңдігі мен сапасын ұсынады. ҚР ҰҒА Хабарлары. Химия және технология сериясы Emerging Sources Citation Index-ке енуі біздің қоғамдастық үшін ең өзекті және беделді химиялық ғылымдар бойынша контентке адалдығымызды білдіреді.

НАН РК сообщает, что научный журнал «Известия НАН РК. Серия химии и технологий» был принят для индексирования в Emerging Sources Citation Index, обновленной версии Web of Science. Содержание в этом индексировании находится в стадии рассмотрения компанией Clarivate Analytics для дальнейшего принятия журнала в the Science Citation Index Expanded, the Social Sciences Citation Index и the Arts & Humanities Citation Index. Web of Science предлагает качество и глубину контента для исследователей, авторов, издателей и учреждений. Включение Известия НАН РК в Emerging Sources Citation Index демонстрирует нашу приверженность к наиболее актуальному и влиятельному контенту по химическим наукам для нашего сообщества.

**FOOD SAFETY AND HACCP SYSTEM
IN THE *PHYSALIS* CONFITURE PRODUCTION**

Abstract. The identification of hazards and the principles of the food safety management system are considered. Within the processing of the fruit and berry raws, the jam and confiture production technologies could assume Critical Control Points that will influence the final product safety. In the production of *Physalis* confiture with a lemon, a sugar and apple pectin, by taking into account the principles of the HACCP system, the technological processes are analyzed. *Physalis* as a natural antioxidant has a high nutritional value and useful features in medicine. In this regard it is important to keep all *Physalis* benefits in the confiture production. Each technological process step by step analyzed, and prerequisites of the Critical Control Points were determined. The most important production stages are: reception and sorting, cleaning and sterilization. For the avoiding of the negative factors, monitoring system, control and corrective actions on the base of the HACCP / MS ISO 22000:2018 Food safety management systems standard are offered.

Key-words: food safety, HACCP, confiture, *Physalis*, hazards, risks, prerequisite.

Introduction

Safety of food products is the concept according to which the food products will not cause any harm to the consumer if they are prepared and/or eaten according to the appropriate application. In this regard, for the supporting of the specified concept and regulations of the harmless productions, a safety management system of food is important. Investments into safety management systems of food are key prerequisite of reliable and stable supply of safe food products and growth of international trade [2].

HACCP (Hazard Analysis and Critical Control Points) system is a simple and logical control system based on the concept of preventing problems by identifying hazards, establishing critical control points and developing measures for monitoring, preventing and correcting them. It should be developed taking into account seven basic principles [4]:

1. Conduction of possible hazards analysis;
2. Identification of Critical Control Points (CCP).
3. Determination of Critical Limits for CCP.
4. Establishment of a monitoring system for control on CCP.
5. Setting of corrective actions.
6. Fixing of verification procedures.
7. Establishment of principles for maintaining records and documentation.

Within the processing of raw fruits and berry, the jam and confiture production technologies Critical Control Points that will influence the final product safety can be established.

To obtain confiture based on *Physalis*, following products are used: *Physalis* fruits, lemon, sugar and apple pectin.

The technological process of production of the confiture consists of: reception and sorting of initial products, cleaning, washing, grinding and mixing, filling, packing, sterilization, storage. There is a potential risk of hazard detection in each stage of the production of confiture.

The HACCP system should take into account all categories of potential risk: biological, chemical and physical hazards [8].

Biological risks include risks resulting from the action of living organisms including yeast (osmophilic yeast), microorganisms (pathogens), protozoa, parasites, etc., their toxins and waste products [3,5].

Chemical risks can be divided depending on the source of origin into three following groups:

1. Inadvertently ingested chemicals;

a) Agricultural chemicals: pesticides, herbicides, plant growth regulators, etc.

b) Chemicals used in enterprises: cleaning, washing and disinfecting agents, lubricating oils, etc.

c) Infections from the external environment: lead, arsenic, cadmium, mercury, etc.

2. Naturally occurring risk factors of products plant, animal or microbial metabolism, such as aflatoxins.

3. Chemicals intentionally added to food, such as preservatives, acids, food additives, substances that facilitate processing, etc.

Physical risks are associated with the presence of any physical material that is not present in the natural product or the food product, and which can cause disease or harm to the person who consumed the food product (glass, metal, plastic, etc.) [6].

MATERIALS AND METHODS

For the preparation of the confiture following ingredients were used: *Physalis*, sugar, lemon and apple pectin. Organoleptic and physicochemical properties were analyzed in accordance with the GOST (State standard) 34447-2018 “Confiture” [9,10].

Physalis is a member of the Solanaceae family that owns a large number of edible plants: potatoes, tomatoes, eggplants and others. In recent years, *Physalis* has begun to firmly conquer the world markets due to its high nutritional value and the promise of its application in medicine in the treatment of malaria, hepatitis, rheumatism, arthritis, dermatitis, asthma, cardiovascular and oncological diseases, Alzheimer's disease, dementia and anti-fatigue. *Physalis* fruits contain all the essential and non-essential amino acids, in the largest number of essential *L-valine* and *L-isoleucine*, and of the interchangeable amino acids *L-tyrosine*. The phytoncide content makes the *Physalis* fruits as good physiological an antiseptic, they also contain polyphenols, ascorbic acid (vitamin C), carotenes (vitamin A), thiamine (vitamin B1), riboflavin (vitamin B2), niacin (vitamin B3), calcium, ferrum, phosphorus and other organic acids, macro- and microelements, tannins. The content of solids is in the range from 6% to 10%. *Physalis* fruits are used in the treatment of diseases of the gastrointestinal tract, chronic cholecystitis, in hypertension, as a multivitamin, and extracts of the *Physalis* have anti-inflammatory, hemostatic and analgesic effects. Due to the presence of water-soluble pectin and gelling properties, *Physalis* has been used in the cooking, in the preparation of jelly, marmalade, confiture, jam, yoghurt and soft drinks [1,7,11].

Results and discussion

In the presented work, an analysis of the likely hazardous factors in the production of *Physalis* confiture is carried out. All stages of production were analyzed as sources of hazards: reception and sorting of initial products, cleaning, washing, grinding and mixing, filling, packing, sterilization, storage. The summarized results are presented in table 1.

Table 1- Hazard Analysis in the production of *Physalis* confiture

Name of operation	Process parameters	Considered factors	Controlled hazards	Preventive action	Responsible person
1. Reception and sorting of <i>Physalis</i> , sugar and lemon	<i>Physalis</i> berries must be fresh or frozen, quite ripe, clean, without foreign smell, without peduncles, heterogeneous in size and color, without any damage and disease. Lemon fruits are fresh, clean, not ugly, without mechanical damage, without damage by pests and diseases, with a pedunclet exactly cut at the base of the fruit	Microbiological	a) bacteria of the group of <i>Escherichia coli</i> (BGEC), b) pathogenic microorganisms	Control at the reception	Head of Laboratory
		Chemical	a) pesticides b) herbicides c) plant growth regulators	Input control	Head of Laboratory
		Physical	a) glass b) metal c) plastic	Control at the reception	Head of Laboratory
	Presence of microorganisms in sugar	Microbiological	Pathogens	Control at the reception	Head of Laboratory
		Chemical	a) mercury b) arsenic c) copper	Input control	Head of Laboratory
		Physical	a) glass b) metal c) plastic	Input control	Head of Laboratory
2. Cleaning	The remains of unsuitable parts of raw materials	microbiological	Bacteria, viruses, yeasts, moulds and viruses	Cleaning process control	Foreman
3. Washing	Detergent residues	Physical	At non-observance of the washing process, the berries which are not completely cleared from strangers can remain	Control of washing process	Foreman
4. Grinding and mixing	Metal fragments, personal belongings of staff	Physical	If the grinding and mixing processes are disregarded, foreign objects or particles can input into the finished product	Control grinding and mixing processes	Foreman
5. Filling	Contaminated packaging	Microbiological	Sterilizing	Control of the filling process into the packaging, the creation of aseptic conditions	Foreman
6. Packing	Presence of foreign objects	Physical	If the packing process is disregarded, foreign objects or particles can input into the finished product (rubber from the cover, glass, plastic).	Control of the packing process	Foreman
7. Sterilization	Incorrect compliance of the sterilization process	Microbiological	<i>Escherichiacoli</i> bacteria	Creating aseptic conditions Use of metal detector	Foreman
		Physical	Impurities Metal parts of equipment		
8. Storage	Package integrity	Microbiological	Temperature, °C Duration, h	Control of temperature-time variation	Foreman

The technological scheme for the obtaining of *Physalis* confiture with the identification of possible CCP (Critical Control Points) is presented in Figure 1.

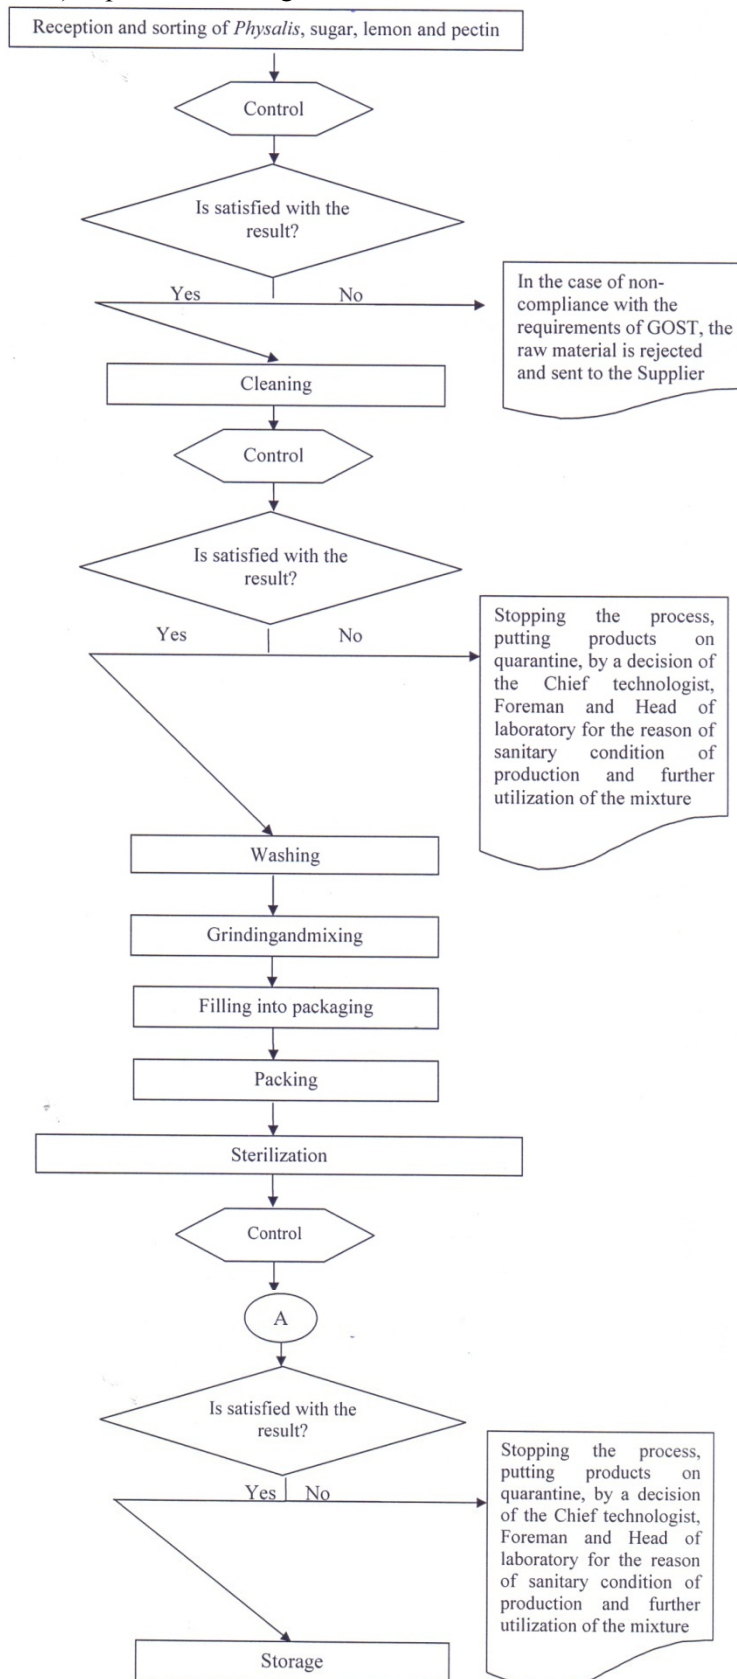

Figure 1 - Technological scheme of *Physalis* confiture production and CCPs

By analyzing of the Figure 1, three CCPs with high risks are identified: reception and sorting, cleaning and sterilization. These production stages and offered control actions are presented in the Table 2.

Table 2 - Prerequisites of the CCPs risk assessment and control actions in the production of *Physalis* confiture

Prerequisite	Risk	Control actions	Degree of risk
CCP 1	Reception and sorting of <i>Physalis</i> , lemon, sugar and apple pectin	<i>Physalis</i> berries must be fresh or frozen, quite ripe, clean, without foreign smell, without peduncles, heterogeneous in size and color, without any damage and disease. The fruits of the lemon are fresh, clean, not deformed, without mechanical damage, without damage by pests and diseases, with a stems evenly cut off at the base of the fruit. More thorough visual inspection and laboratory analysis of berries and fruits.	High
CCP 2	Cleaning	Compliance strictly with the parameters of cleaning, identifying rotten, mismatching berries, cleaning of foreign objects	High
CCP 3	Sterilization	Control of sterilization parameters	High

CONCLUSION

Thus, the analysis of the most possible dangers in the production of confiture from *Physalis* carried out, with potential prerequisites of the CCPs (Critical Control Points) istaken into account: biological, chemical, and physical risks. The dangerous factors and critical control points are determined. The most important production stages are: reception and sorting, cleaning and sterilization. As the checking operations are necessary visual inspection and laboratory analysis of berries and fruits. A monitoring system for the control of CCPs and corrective actions are also required. For the avoiding of the negative factors, monitoring system, control and corrective actions on the base of the HACCP / MS ISO 22000:2018 Food safety management systems standard are offered.

PHYSALIS КОНФИТЮРИ ӨНДІРІСІНДЕГІ ТАМАҚ ҚАУІПСІЗДІГІ ЖӘНЕ НАССР ЖҮЙЕСІ

Аннотация. Тамақ өнімдерінің қауіпсіздігін басқару жүйесінің қауіптілігі мен принциптері қарастырылады. Жеміс-жидек шикізатын өңдеу кезінде джем мен конфитюрді өндіру технологияларының соңғы өнімнің сапасына әсер ететін сыни бақылау нүктелері болуы мүмкін. Лимон, қант және алма пектині бар *Physalis* конфитюрасын өндіру кезінде ХАССП жүйесінің принциптерін есепке ала отырып, технологиялық үдерістер талданады. *Physalis* табиғи антиоксидант ретінде медицинада жоғары тағамдық құндылыққа және пайдалы қасиеттерге ие. Осыған байланысты конфитюралар өндірісіндегі *Physalis*-тің барлық артықшылықтарын сақтау маңызды. Әрбір технологиялық процесс кезең-кезеңімен талданады және сыни бақылау нүктелері анықталады. Өндірістің ең маңызды кезеңдері: қабылдау және сұрыптау, тазалау және зарарсыздандыру. Жағымсыз факторларды болдырмау үшін НАССР / ISO 22000: 2018 стандарты негізінде мониторинг, бақылау және түзету әрекеттері ұсынылады.

Түйін сөздер: тағам қауіпсіздігі, ХАССП, конфитюр, физалис, қауіптер, тәуекелдер, алғышарты.

Р.С. Алибеков, Д. С. Дабаде,
К. А. Уразбаева, Г.Е. Орымбетова, З. И. Алибекова

ПИЩЕВАЯ БЕЗОПАСНОСТЬ И СИСТЕМА НАССР В ПРОИЗВОДСТВЕ КОНФИТЮРА *PHYSALIS*

Аннотация. Опасности и принципы системы управления безопасностью пищевых продуктов рассматриваются. Технологии производства джема и конфитюра при переработке плодово-ягодного сырья могут иметь критические контрольные точки, которые будут влиять на качество конечного продукта. При производстве конфитюра *Physalis* лимоном, сахаром и яблочным пектином, с учетом принципов системы ХАССП анализируются технологические процессы. *Physalis* как природный антиоксидант обладает высокой пищевой ценностью и полезными свойствами в медицине. В связи с этим важно сохранить все преимущества *Physalis* в производстве конфитюров. Каждый технологический процесс поэтапно анализируется, и определяются критические контрольные точки. Наиболее важными этапами производства являются: прием и сортировка, очистка

и стерилизация. Во избежание негативных факторов предлагаются системы мониторинга, контроля и корректирующие действия на основе стандарта HACCP / ISO 22000: 2018 системы управления безопасностью пищевых продуктов.

Ключевые слова: пищевая безопасность, HACCP, конфитюр, физалис, опасности, риски, пререквизит.

Publication Ethics and Publication Malpractice in the journals of the National Academy of Sciences of the Republic of Kazakhstan

For information on Ethics in publishing and Ethical guidelines for journal publication see <http://www.elsevier.com/publishingethics> and <http://www.elsevier.com/journal-authors/ethics>.

Submission of an article to the National Academy of Sciences of the Republic of Kazakhstan implies that the described work has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see <http://www.elsevier.com/postingpolicy>), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. In particular, translations into English of papers already published in another language are not accepted.

No other forms of scientific misconduct are allowed, such as plagiarism, falsification, fraudulent data, incorrect interpretation of other works, incorrect citations, etc. The National Academy of Sciences of the Republic of Kazakhstan follows the Code of Conduct of the Committee on Publication Ethics (COPE), and follows the COPE Flowcharts for Resolving Cases of Suspected Misconduct (http://publicationethics.org/files/u2/New_Code.pdf). To verify originality, your article may be checked by the Cross Check originality detection service <http://www.elsevier.com/editors/plagdetect>.

The authors are obliged to participate in peer review process and be ready to provide corrections, clarifications, retractions and apologies when needed. All authors of a paper should have significantly contributed to the research.

The reviewers should provide objective judgments and should point out relevant published works which are not yet cited. Reviewed articles should be treated confidentially. The reviewers will be chosen in such a way that there is no conflict of interests with respect to the research, the authors and/or the research funders.

The editors have complete responsibility and authority to reject or accept a paper, and they will only accept a paper when reasonably certain. They will preserve anonymity of reviewers and promote publication of corrections, clarifications, retractions and apologies when needed. The acceptance of a paper automatically implies the copyright transfer to the National Academy of Sciences of the Republic of Kazakhstan.

The Editorial Board of the National Academy of Sciences of the Republic of Kazakhstan will monitor and safeguard publishing ethics.
