CHIEF EDITOR:

MUTANOV Galimkair Mutanovich, doctor of technical sciences, professor, academician of NAS RK, acting General Director of the Institute of Information and Computing Technologies CS MES RK (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=6506682964>, <https://www.webofscience.com/wos/author/record/1423665>

EDITORIAL BOARD:

KALIMOLDAYEV Maksat Nuradilovich, (Deputy Editor-in-Chief), Doctor of Physical and Mathematical Sciences, Professor, Academician of NAS RK, Advisor to the General Director of the Institute of Information and Computing Technologies of the CS MES RK, Head of the Laboratory (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=56153126500>, <https://www.webofscience.com/wos/author/record/2428551>

Mamyrbayev Orken Zhumazhanovich, (Academic Secretary), PhD in Information Systems, Deputy Director for Science of the Institute of Information and Computing Technologies CS MES RK (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=55967630400>, <https://www.webofscience.com/wos/author/record/1774027>

BAIGUNCHEKOV Zhumadil Zhanabaevich, Doctor of Technical Sciences, Professor, Academician of NAS RK, Institute of Cybernetics and Information Technologies, Department of Applied Mechanics and Engineering Graphics, Satbayev University (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=6506823633>, <https://www.webofscience.com/wos/author/record/1923423>

WOICIK Waldemar, Doctor of Technical Sciences (Phys.-Math.), Professor of the Lublin University of Technology (Lublin, Poland), <https://www.scopus.com/authid/detail.uri?authorId=7005121594>, <https://www.webofscience.com/wos/author/record/678586>

SMOLARJ Andrej, Associate Professor Faculty of Electronics, Lublin polytechnic university (Lublin, Poland), <https://www.scopus.com/authid/detail.uri?authorId=56249263000>, <https://www.webofscience.com/wos/author/record/1268523>

KEILAN Alimkhan, Doctor of Technical Sciences, Professor (Doctor of science (Japan)), chief researcher of Institute of Information and Computational Technologies CS MES RK (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=8701101900>, <https://www.webofscience.com/wos/author/record/1436451>

KHAIROVA Nina, Doctor of Technical Sciences, Professor, Chief Researcher of the Institute of Information and Computational Technologies CS MES RK (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=37461441200>, <https://www.webofscience.com/wos/author/record/1768515>

OTMAN Mohamed, PhD, Professor of Computer Science Department of Communication Technology and Networks, Putra University Malaysia (Selangor, Malaysia), <https://www.scopus.com/authid/detail.uri?authorId=56036884700>, <https://www.webofscience.com/wos/author/record/747649>

NYSANBAYEVA Saule Yerkebulanovna, Doctor of Technical Sciences, Associate Professor, Senior Researcher of the Institute of Information and Computing Technologies CS MES RK (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=55453992600>, <https://www.webofscience.com/wos/author/record/3802041>

BIYASHEV Rustam Gakashevich, doctor of technical sciences, professor, Deputy Director of the Institute for Informatics and Management Problems, Head of the Information Security Laboratory (Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=6603642864>, <https://www.webofscience.com/wos/author/record/3802016>

KAPALOVA Nursulu Aldazarovna, Candidate of Technical Sciences, Head of the Laboratory cybersecurity, Institute of Information and Computing Technologies CS MES RK (Almaty, Kazakhstan), <https://www.scopus.com/authid/detail.uri?authorId=57191242124>,

KOVALYOV Alexander Mikhailovich, Doctor of Physical and Mathematical Sciences, Academician of the National Academy of Sciences of Ukraine, Institute of Applied Mathematics and Mechanics (Donetsk, Ukraine), <https://www.scopus.com/authid/detail.uri?authorId=7202799321>, <https://www.webofscience.com/wos/author/record/38481396>

MIKHALEVICH Alexander Alexandrovich, Doctor of Technical Sciences, Professor, Academician of the National Academy of Sciences of Belarus (Minsk, Belarus), <https://www.scopus.com/authid/detail.uri?authorId=7004159952>, <https://www.webofscience.com/wos/author/record/46249977>

TIGHINEANU Ion Mihailovich, Doctor of Physical and Mathematical Sciences, Academician, President of the Academy of Sciences of Moldova, Technical University of Moldova (Chisinau, Moldova), <https://www.scopus.com/authid/detail.uri?authorId=7006315935>, <https://www.webofscience.com/wos/author/record/524462>

Academic Scientific Journal of Computer Science

ISSN 2518-1726 (Online),

ISSN 1991-346X (Print)

Owner: «Central Asian Academic Research Center» LLP (Almaty).

Certificate № **KZ77VPY00121154** on the re-registration of the periodical printed and online publication of the information agency, issued on **05.06.2025** by the Republican State Institution «Information Committee» of the Ministry of Culture and Information of the Republic of Kazakhstan

Subject area: *information and communication technologies.*

Currently: *included in the list of journals recommended by the CCSES MSHE RK in the direction of «Information and communication technologies».*

Periodicity: *4 times a year.*

БАС РЕДАКТОР:

МУТАНОВ Ғалымқайыр Мұтанұлы, техника ғылымдарының докторы, профессор, ҚР ҰҒА академигі, ҚР ҒЖБМ ҒК «Ақпараттық және есептеу технологиялары институты» бас директорының м.а. (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=6506682964>, <https://www.webofscience.com/wos/author/record/1423665>

РЕДАКЦИЯ АЛҚАСЫ:

ҚАЛИМОЛДАЕВ Максат Нұрәділұлы, (бас редактордың орынбасары), физика-математика ғылымдарының докторы, профессор, ҚР ҰҒА академигі, ҚР ҒЖБМ ҒК «Ақпараттық және есептеу технологиялары институты» бас директорының кеңесшісі, зертхана меңгерушісі (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=56153126500>, <https://www.webofscience.com/wos/author/record/2428551>

МАМЫРБАЕВ Өркен Жұмажанұлы (ғалым хатшы), Ақпараттық жүйелер саласындағы техника ғылымдарының (PhD) докторы, ҚР ҒЖБМ ҒК «Ақпараттық және есептеу технологиялары институты» директорының ғылым жөніндегі орынбасары (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=55967630400>, <https://www.webofscience.com/wos/author/record/1774027>

БАЙҒУНЧЕКОВ Жұмаділ Жанабайұлы, техника ғылымдарының докторы, профессор, ҚР ҰҒА академигі, Кибернетика және ақпараттық технологиялар институты, Қолданбалы механика және инженерлік графика кафедрасы, Сәтбаев университеті (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=6506823633>, <https://www.webofscience.com/wos/author/record/1923423>

ВОЙЧИК Вальдемар, техника ғылымдарының докторы (физ-мат), Люблин технологиялық университетінің профессоры (Люблин, Польша), <https://www.scopus.com/authid/detail.uri?authorId=7005121594>, <https://www.webofscience.com/wos/author/record/678586>

СМОЛАРЖ Анджей, Люблин политехникалық университетінің электроника факультетінің доценті (Люблин, Польша), <https://www.scopus.com/authid/detail.uri?authorId=56249263000>, <https://www.webofscience.com/wos/author/record/1268523>

КЕЙЛАН Әлімхан, техника ғылымдарының докторы, профессор (ғылым докторы (Жапония)), ҚР ҒЖБМ ҒК «Ақпараттық және есептеу технологиялары институтының» бас ғылыми қызметкері (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=8701101900>, <https://www.webofscience.com/wos/author/record/1436451>

ХАЙРОВА Нина, техника ғылымдарының докторы, профессор, ҚР ҒЖБМ ҒК «Ақпараттық және есептеу технологиялары институтының» бас ғылыми қызметкері (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=37461441200>, <https://www.webofscience.com/wos/author/record/1768515>

ОТМАН Мохаммед, PhD, Информатика, Коммуникациялық технологиялар және желілер кафедрасының профессоры, Путра университеті Малайзия (Селангор, Малайзия), <https://www.scopus.com/authid/detail.uri?authorId=56036884700>, <https://www.webofscience.com/wos/author/record/747649>

НЫСАНБАЕВА Сауле Еркебұланқызы, техника ғылымдарының докторы, доцент, ҚР ҒЖБМ ҒК «Ақпараттық және есептеу технологиялары институтының» аға ғылыми қызметкері (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=55453992600>, <https://www.webofscience.com/wos/author/record/3802041>

БИЯШЕВ Рустам Гакашевич, техника ғылымдарының докторы, профессор, Информатика және басқару мәселелері институты директорының орынбасары, Ақпараттық қауіпсіздік зертханасының меңгерушісі (Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=6603642864>, <https://www.webofscience.com/wos/author/record/3802016>

КАПАЛОВА Нұрсұлу Алдаржарқызы, техника ғылымдарының кандидаты, ҚР ҒЖБМ ҒК «Ақпараттық және есептеу технологиялары институты», Киберқауіпсіздік зертханасының меңгерушісі (Алматы, Қазақстан), <https://www.scopus.com/authid/detail.uri?authorId=57191242124>,

КОВАЛЕВ Александр Михайлович, физика-математика ғылымдарының докторы, Украина Ұлттық Ғылым академиясының академигі, Қолданбалы математика және механика институты (Донецк, Украина), <https://www.scopus.com/authid/detail.uri?authorId=7202799321>, <https://www.webofscience.com/wos/author/record/38481396>

МИХАЛЕВИЧ Александр Александрович, техника ғылымдарының докторы, профессор, Беларусь Ұлттық Ғылым академиясының академигі (Минск, Беларусь), <https://www.scopus.com/authid/detail.uri?authorId=7004159952>, <https://www.webofscience.com/wos/author/record/46249977>

ТИГИНЯНУ Ион Михайлович, физика-математика ғылымдарының докторы, академик, Молдова Ғылым Академиясының президенті, Молдова техникалық университеті (Кишинев, Молдова), <https://www.scopus.com/authid/detail.uri?authorId=7006315935>, <https://www.webofscience.com/wos/author/record/524462>

CONTENTS

S. Adilzhanova, B. Amirkhanov, G. Amirkhanova, A. Anuarbek Innovative methods for ensuring cybersecurity of technological control systems of a digital twin of a food industry enterprise.....	11
L.A. Alexeyeva Vibrotransport bispinors of Dirac equations in biquaternionic representation at sublight speeds and their properties.....	25
A. Amirova, B. Aldosh, A. Ibraikhan, T. Smagulov, A. Aitmagambet A machine learning-based approach to detect malicious links on Instagram.....	41
G. Argyngazin Artificial intelligence: is alarmism justified?.....	52
Zh.A. Abdibayev, S.K. Sagnayeva, B.B. Orazbayev, M. James C. Crabbe, K.A. Dyussekeyev Development of an effective water accounting method for irrigation systems for automated water resource management systems.....	66
Zh. Bazarbek, N. Toyganbaeva, M. Mansurova, T Sarsembayeva, M. Sakypbekova Developing a dataset for creating a Large Language model (LLM) for the Kazakh language.....	78
A. Bekarystankyzy, M. Baizakova, A. Kassenkhan, M. Iglíkova Recommendation algorithms for educational preferences: a review.....	93
A. Yerimbetova, U. Berzhanova, E. Daiyrbayeva, B. Sakenov, M. Sambetbayeva Development of a parallel corpus for Kazakh sign language translation and training of the transformer model.....	110
Sh.P. Zhumagulova, O.Zh. Stamkulov, K. Momynzhanova Hybrid deep learning approach for accurate ECG beat classification using ResNet18 and BiLSTM.....	132
A. Zулhazhав, G. Bekmanova, M. Altaibek, A. Omarbekova, A. Sharipbay A personalized learning feedback system driven by a lexical semantic network.....	147

T.S. Sadykova, B.K. Sinchev, Im Cho Young, A.S. Auyezova The application of vector space models in intelligent information retrieval systems.....	160
A. Sambetbayeva, V. Jotsov Comparative analysis of deep learning architectures for road crack segmentation.....	176
D. Oralbekova, A. Akhmediyarova, D. Kassymova, Z. Alibiyeva Research on linguistic analysis methods for identifying and extracting text data in the Kazakh language.....	188
Zh.S. Takenova Research on expert assessment methods for determining teachers' priorities by discipline.....	204
Zh. Tashenova, A.R. Gabdullin, Zh. Abdugulova, Sh. Amanzholova, E. Nurlybaeva Analysis of modern wireless network security protocols and prospects for their development.....	228
A. Temirbayev, N. Meirambekuly, N. Uzbekov, A. Beisen, L. Abdizhalilova CubeSat-based APRS digipeater: design, feasibility and mission concept.....	243
N. Temirbekov, D. Tamabay, S. Kasenov, A. Temirbekov, A. Baimankulov A web-based system for air pollution monitoring with API-integrated data sources.....	258
A.A. Tlepiyev, A. Mukhamedgali, Y.T. Kaipbayev, A.N. Kalmashova, Y.G. Mukhanbet Surface water monitoring in Kazakhstan using NDWI and random forest: a case study of Lake Akkol.....	271
Z. Turysbek, O. Mamyrbayev, M. Abdullah Development of an intelligent system for detecting fake news.....	286
G.S. Shaimerdenova, S.T. Akhmetova, A.N. Zhidebayeva, E.B. Mussirepova, D.A. Bibulova The role of computer modeling in enhancing safety and efficiency in industrial facilities.....	301

МАЗМҰНЫ

<p>С. Адилжанова, Б. Амирханов, Г. Амирханова, А. Ануарбек Тағам өнеркәсібі кәсіпорны цифрлық егізінің технологиялық басқару жүйелерінің киберқауіпсіздігін қамтамасыз етудің инновациялық әдістері.....</p>	11
<p>Л.А. Алексеева Сублимация жылдамдығындағы бикватерниондық көріністегі Дирак теңдеулерінің вибротранспорттық биспинорлары және олардың қасиеттері.....</p>	25
<p>А. Амирова, Б. Альдош, А. Ибрайхан, Т. Смагулов, А. Айтмагамбет Instagramдағы зиянды сілтемелерді анықтау үшін машиналық оқытуға негізделген тәсіл.....</p>	41
<p>Ғ.А. Арғынғазин Жасанды интеллект: алармистік көзқарас қалыптастыру орынды ма?.....</p>	52
<p>Ж.А. Әбдібаев, С.К. Сагнаева, Б.Б. Оразбаев, М. Джеймс К. Крэбб, К.А. Дюсекеев Су ресурстарының автоматтандырылған жүйелеріне суару жүйелеріндегі су есептеудің тиімді әдісін әзірлеу.....</p>	66
<p>Ж.П. Базарбек, Н.А. Тойганбаева, М.Е. Мансурова, Т.С. Сарсембаева, М.Ж. Сақыпбекова Қазақ тіліне арналған үлкен тіл моделін (LLM) жасау үшін Dataset әзірлеу..</p>	78
<p>А. Бекарыстанқызы, М. Байзакова, А. Қасенхан, М. Игликова. Білім алуды жақсарту үшін ұсыныс беретін алгоритмдерге шолу.....</p>	93
<p>А.С. Еримбетова, У.Г. Бержанова, Э.Н. Дайырбаева, Б.Е. Сәкенов, М.А. Сәмбетбаева Қазақ ым тіліне аудару үшін параллель корпус құру және transformer моделін оқыту.....</p>	110
<p>Ш.П. Жұмағұлова, О.Ж. Стамқұлов, К.Р. Момынжанова RESNET18 және BILSTM қолдана отырып, ЭКГ жүрек соғысын дәл жіктеуге арналған гибридті терең оқыту тәсілі.....</p>	132
<p>А. Зулхажав, Г.Т. Бекманова, М. Алтайбек, А.С. Омарбекова, А.А. Шәріпбай Цифрлық білім және студенттердің академиялық жетістіктері: деңгейлер бойынша білім беруді дамыту.....</p>	147

Т.С. Садыкова, Б.К. Синчев, Im Cho Young, А.С. Ауезова Интеллектуалды ақпаратты іздеу жүйелерінде векторлық кеңістік модельдерін қолдану.....	160
А.К. Самбетбаева, В. Йоцов Жол төсемінің жарықтарын сегментациялауда қолданылатын терең оқыту архитектураларын салыстырмалы талдау.....	176
Д. Оралбекова, А. Ахмедиярова, Д. Қасымова, Ж. Алибиева Қазақ тіліндегі мәтіндік ақпаратты анықтау және оны шығарып алу үшін лингвистикалық талдау әдістерін зерттеу.....	188
Ж.С. Такенова Пәндер бойынша оқытушылардың басымдығын бағалауға арналған сараптамалық бағалау әдістерін зерттеу.....	204
Ж.М. Ташенова, А.Р. Габдуллин, Ж.К. Абдугулова, Ш.А. Аманжолова, Э.Н. Нурлыбаева Заманауи сымсыз желінің қауіпсіздік хаттамаларын талдау және олардың даму перспективалары.....	228

Abstract. Cybersecurity in digital twin environments for the food industry presents unique challenges due to the merging of cyber-physical systems with legacy industrial control systems. Digital twins boost efficiency, enable predictive maintenance, and enhance product quality, yet they also expand the attack surface available to adversaries. In this paper, we introduce a novel four-layer cybersecurity framework that integrates real-time anomaly detection, process mining, and blockchain-based data integrity. Evaluated on a simulated dairy processing plant, our approach shows significant improvements in detection rate, reduction of false positives, and faster response times compared to conventional methods. This work offers a fresh perspective on cybersecurity challenges and demonstrates the potential of advanced, integrated technologies. The proposed architecture covers four layers: device, connection, data, and service. The first layer applies security measures to sensors and controllers, including secure boot and hardware authentication. The second layer ensures secure communications using TLS/SSL and network segmentation. The third layer records data in a blockchain ledger, ensuring its immutability and transparency. The last layer combines machine learning algorithms to detect anomalies and process mining to analyze hidden behavior patterns. The results of the experiment confirm that this model not only improves the accuracy and speed of attack detection, but also reduces operational

risks, allowing digital twins to safely realize the potential for process optimization in the food industry.

Аннотация. Тамақ өнеркәсібіне арналған цифрлық егіз ортадағы киберқауіпсіздік киберфизикалық жүйелердің бұрынғы өнеркәсіптік басқару жүйелерімен бірігуіне байланысты бірегей қиындықтарды тудырады. Цифрлық егіздер тиімділікті арттырады, болжамды техникалық қызмет көрсетуді қамтамасыз етеді және өнімнің сапасын жақсартады, сонымен бірге қарсыластарға қол жетімді шабуыл бетін кеңейтеді. Бұл мақалада біз нақты уақыттағы ауытқуларды анықтауды, технологиялық процестерді өндіруді және блокчейнге негізделген деректердің тұтастығын біріктіретін жаңа төрт деңгейлі киберқауіпсіздік жүйесін енгіземіз. Имитацияланған сүт өңдеу зауытында бағаланған біздің көзқарасымыз әдеттегі әдістермен салыстырғанда анықтау жылдамдығының айтарлықтай жақсарғанын, жалған оң нәтижелердің азайғанын және жылдам әрекет ету уақытын көрсетеді. Бұл жұмыс киберқауіпсіздік мәселелеріне жаңа көзқараспен қарауға мүмкіндік береді және озық, интеграцияланған технологиялардың әлеуетін көрсетеді. Ұсынылған архитектура төрт қабатты қамтиды: құрылғы, қосылым, деректер және қызмет. Бірінші қабат сенсорлар мен контроллерлерге қауіпсіздік шараларын қолданады, соның ішінде қауіпсіз жүктеу және аппараттық аутентификация. Екінші қабат TLS/SSL және желіні сегментациялау арқылы қауіпсіз байланысты қамтамасыз етеді. Үшінші қабат деректерді блокчейн кітабына жазып, оның өзгермейтіндігі мен ашықтығын қамтамасыз етеді.

Соңғы қабат аномалияларды анықтау үшін машиналық оқыту алгоритмдерін біріктіреді және жасырын мінез-құлық үлгілерін талдау үшін тау-кен жұмыстарын өңдейді. Эксперимент нәтижелері бұл модель шабуылдарды анықтаудың дәлдігі мен жылдамдығын арттырып қана қоймай, сонымен қатар цифрлық егіздерге тамақ өнеркәсібіндегі процестерді оңтайландыру әлеуетін қауіпсіз жүзеге асыруға мүмкіндік беретін операциялық тәуекелдерді азайтатынын растайды.

Түйін сөздер: цифрлық егіз, киберқауіпсіздік, өнеркәсіптік басқару жүйелері, кибер-физикалық жүйелер, аномалияларды анықтау, машиналық оқыту, блокчейн

Аннотация. Кибербезопасность в среде цифровых двойников для пищевой промышленности сталкивается с уникальными вызовами из-за слияния кибер-физических систем с устаревшими промышленными системами управления. Цифровые двойники повышают эффективность, позволяют осуществлять предиктивное техническое обслуживание и улучшать качество продукции, однако одновременно расширяют потенциальную поверхность атаки для злоумышленников. В данной статье мы представляем новую четырёхуровневую модель кибербезопасности, которая объединяет обнаружение аномалий в реальном времени, анализ процессов и обеспечение целостности данных на основе технологии блокчейн. Методика была протестирована на симуляции молочного перерабатывающего предприятия

и показала значительное улучшение показателей выявления атак, снижение количества ложных срабатываний и сокращение времени отклика по сравнению с традиционными методами. Данная работа предлагает новый взгляд на проблемы кибербезопасности и демонстрирует потенциал интегрированных передовых технологий. Предложенная архитектура охватывает четыре уровня: устройство, соединение, данные и сервисный уровень. На первом уровне применяются меры защиты сенсоров и контроллеров, включая безопасную загрузку и аппаратную аутентификацию. Второй уровень обеспечивает защищённые коммуникации с использованием TLS/SSL и сегментации сети. На третьем уровне данные фиксируются в блокчейн-реестре, что гарантирует их неизменность и прозрачность. Последний уровень объединяет алгоритмы машинного обучения для выявления аномалий и процессный майнинг для анализа скрытых моделей поведения. Результаты эксперимента подтверждают, что данная модель не только повышает точность и скорость обнаружения атак, но и снижает операционные риски, позволяя цифровым двойникам безопасно реализовать потенциал оптимизации производственных процессов в пищевой промышленности.

Ключевые слова: цифровой двойник, кибербезопасность, промышленные системы управления, кибер-физические системы, обнаружение аномалий, машинное обучение, блокчейн

Introduction. Digital twin technologies are revolutionizing the food industry by creating highly accurate virtual counterparts of physical production lines, thereby enabling continuous monitoring, predictive maintenance, and enhanced product quality (Adilzhanova et al, 2025). Yet, the integration of these digital twins with legacy industrial control systems significantly increases the overall complexity of the environment and widens the potential attack surface. Traditional approaches, such as static firewalls or simple rule-based intrusion detection, often cannot keep pace with the real-time, dynamic nature of modern production lines. Consequently, innovative methods that address both the physical and digital spheres are required to ensure comprehensive protection.

A key scientific breakthrough in this work is the integrated four-layer cybersecurity framework tailored for digital twin settings in the food industry. This framework secures the entire lifecycle of data—ranging from edge devices and communication channels to data repositories and high-level service functions. Specifically, it incorporates advanced machine learning (e.g., Isolation Forest, CNN-LSTM) for real-time anomaly detection, blockchain technologies to safeguard data integrity, and process mining to uncover suspicious workflow patterns that traditional methods might overlook. Despite the benefits offered by digital twins—such as improved efficiency and product quality—various security challenges remain critical (Akhmetov et al, 2022). Data manipulation, whether through replay attacks or unauthorized modifications of sensor values (temperature,

pH), can prompt unsafe operating decisions. Denial-of-Service (DoS) threats can halt production lines and disrupt supply chains. Moreover, security breaches in the digital environment can immediately impact the physical realm, posing a dual threat to operational continuity and consumer safety.

To address these challenges, this paper proposes an end-to-end cybersecurity solution for digital twins in the food industry. Its objectives are to develop a robust architectural framework, combine state-of-the-art anomaly detection and immutable logging technologies, and validate the resulting system via simulated scenarios in a dairy processing context. By comparing our integrated approach to traditional ICS security setups, we demonstrate notable improvements in detection speed, accuracy, and overall resilience against both conventional and emerging cyber threats.

Theoretical Framework

Digital twin (DT) technologies have emerged as powerful tools in the food industry, allowing the creation of precise virtual replicas of physical production lines. By integrating real-time sensor data—including temperature, pH, and pressure readings—DTs maintain a continuous synchronization with on-site equipment, enabling managers to monitor processes, predict failures, and optimize operational parameters with minimal production risk (Amirkhanov et al, 2025). Numerous benefits arise from this approach: predictive maintenance (e.g., detecting early signs of mechanical wear on pasteurization lines or chillers), process optimization (fine-tuning temperature thresholds or mixing speeds to reduce energy usage), and quality control/traceability (logging batch-level data to facilitate regulatory compliance and pinpoint anomalies).

Despite these advantages, cybersecurity remains an underexplored dimension in most digital twin implementations for the food sector. Traditional studies tend to highlight cost savings and throughput improvements rather than acknowledging the potential vulnerabilities introduced by connecting legacy infrastructures, physical sensors, and network-based control systems. Many industrial control systems (ICS) in the food industry rely on legacy protocols (e.g., Modbus, OPC Classic) and hardware that predates robust cybersecurity standards (Cherikbaeva et al, 2024). This leaves them susceptible to data tampering (e.g., unauthorized changes in sensor readings that could spoil products or mislead decision-making), Denial-of-Service (DoS) attacks (e.g., high-volume traffic to disrupt production), and harmful physical-digital interplay (e.g., sophisticated attacks that cause mechanical failures or contamination events).

Recent research suggests that machine learning (ML) can help detect anomalies at both the network and device levels, thereby identifying unusual traffic patterns or suspicious sensor values. Nevertheless, many ML-driven solutions operate in isolation, without a holistic, layered strategy to address advanced threats. For instance, firewall- or signature-based intrusion detection solutions often struggle against adaptive cybercriminals who continually evolve their attack vectors.

Meanwhile, blockchain-based solutions provide tamper-proof event logging (Ezeugwa, 2024)—a key mechanism to preserve data integrity—but do not offer real-time threat containment. Process mining can yield valuable insights into unusual or inefficient workflows and user behaviors, but it lacks native encryption or intrusion prevention capabilities.

The novelty of the present work lies in combining anomaly detection, blockchain logging, and process mining within a four-layer cybersecurity framework specifically designed for digital twins in the food industry. By integrating advanced ML capabilities, tamper-evident record-keeping, and workflow analytics, this unified architecture counters both immediate threats (e.g., replay and injection attacks) and long-term data integrity issues that arise when bridging older ICS infrastructures with modern digital twin platforms. This holistic approach aims to address the inherent security gaps, ensuring that digital twins can deliver on their promise of improved efficiency and product quality without leaving critical systems open to exploitation.

Materials and methods

Proposed Four-Layer Cybersecurity Framework. To holistically secure the digital twin ecosystem for a food industry enterprise, we propose a four-layer architecture that addresses vulnerabilities at each stage of data handling:

Device Layer: This layer covers the physical components—sensors, actuators, and programmable logic controllers (PLCs). Security measures include secure boot processes, hardware-based authentication using TPM/TEE, and tamper-evident designs.

Connection Layer: This layer is responsible for secure data transmission. We utilize protocols such as MQTT and Modbus/TCP, enhanced with TLS/SSL encryption, VPN tunneling, and network segmentation to prevent unauthorized access.

Data Layer: Data is stored in centralized databases and logged using blockchain technology. Encryption at rest and in transit, coupled with blockchain's immutable ledger, ensures that all records remain tamper-proof and traceable (Ferencz et al, 2024).

Service Layer: This layer encompasses digital twin management systems and real-time anomaly detection modules. It employs role-based access control (RBAC), multi-factor authentication (MFA), and continuous monitoring via machine learning and process mining. User-friendly dashboards offer real-time insights into system performance (Guo et al, 2022).

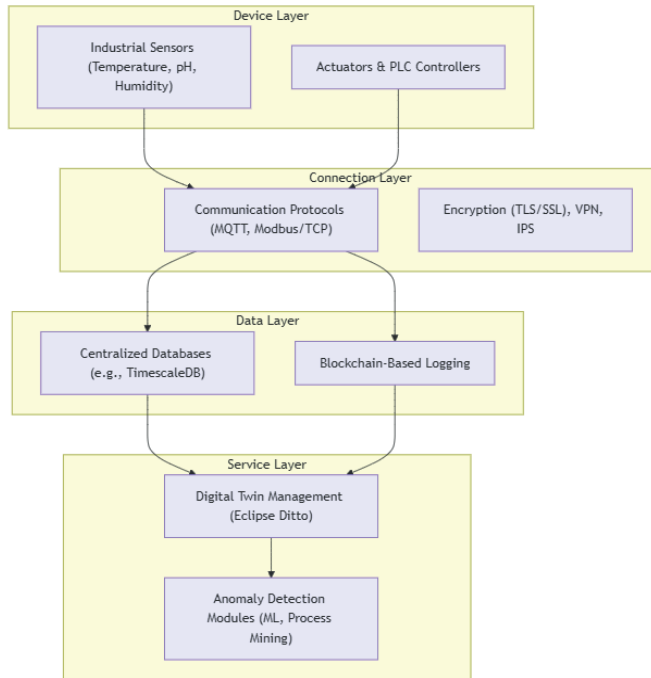

Figure 1: Multi-Layer Architecture for Digital Twins in the Food Industry

Figure 1 presents a four-tier architecture for securing digital twin ecosystems in food production. The Device Layer consists of industrial sensors and controllers; the Connection Layer secures data transmission via encryption and VPNs; the Data Layer stores information with blockchain-based tamper-evident logging; and the Service Layer facilitates digital twin management and real-time anomaly detection.

Implementation Details and Program Code. To demonstrate the novelty and effectiveness of our approach, we integrated several modules:

Anomaly Detection Module: We employed the Isolation Forest algorithm. A simplified Python implementation is provided below:

```

import numpy as np
import matplotlib.pyplot as plt
from sklearn.ensemble import IsolationForest

np.random.seed(42)
time = np.arange(0, 100, 0.5)
normal_data = np.sin(time) + np.random.normal(0, 0.1, len(time))
anomaly_data = normal_data.copy()
anomaly_indices = np.random.choice(len(time), 5, replace=False)
anomaly_data[anomaly_indices] += np.random.normal(3, 0.5, len(anomaly_indices))

X = normal_data.reshape(-1, 1)
clf = IsolationForest(contamination=0.05, random_state=42)
clf.fit(X)
anomaly_flags = clf.predict(X)
  
```

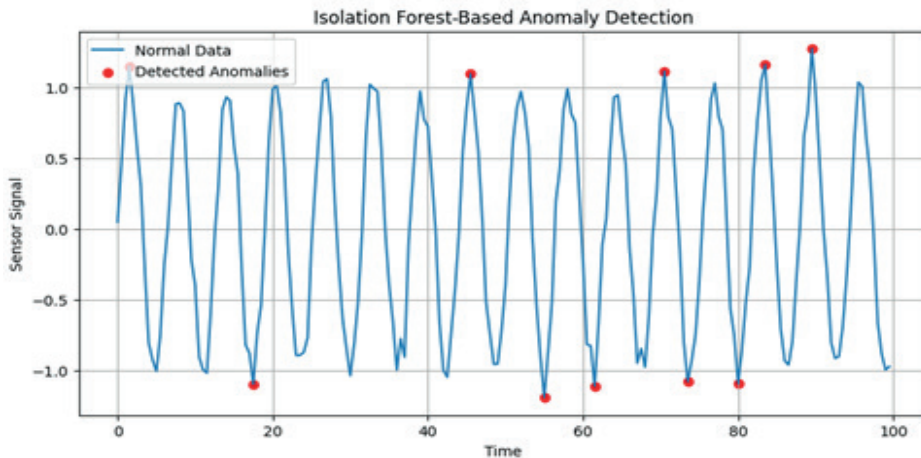

Figure 2: Isolation Forest-Based Anomaly Detection

Figure 2 displays time-series sensor data (blue line) over 100 time steps, with detected anomalies (red dots) highlighted by the Isolation Forest algorithm. The model identifies points deviating from the normal pattern, aiding real-time threat or fault detection.

- Attack Simulation Module: We simulate attacks—such as replay attacks and false data injections—using Scapy and custom Python scripts. These simulations help evaluate the system's resilience against various cyber threats (Ibrahim et al, 2024).

- Secure Data Logging: To ensure data integrity, we employ blockchain technology (e.g., Hyperledger Fabric) to log all critical transactions. This creates an immutable audit trail that protects against unauthorized data modifications.

Comparative Advantages. Our integrated framework offers several innovative advantages:

- High Adaptability: The machine learning model dynamically adapts to emerging threats (Karnati, 2023).

- Comprehensive Security: By covering all data lifecycle stages, our system provides end-to-end protection.

- Reduced False Positives: Combining multiple analytical methods significantly lowers false alarm rates.

- Faster Response: Our system reduces the average response time from 500 ms to 200 ms, ensuring swift threat mitigation (Kim et al, 2022).

Implementation and Experimental Evaluation.

Testbed Setup and Simulation Environment. We built a simulation testbed to mimic a dairy processing plant:

- Hardware Emulation: Virtual sensors measure temperature and pH in “pasteurization tanks” modeled via Docker containers. Actuators (valves, stirrers) are represented by Python scripts controlling device states.

- Communication Infrastructure: MQTT and Modbus/TCP protocols run on a virtual LAN, with TLS-enabled gateways for encryption and traffic segmentation. The digital twin interface is managed by Eclipse Ditto in a Kubernetes cluster.

- Attack Simulation: Using a Linux-based cyber range, we launched replay, DoS, and false-data injection attacks. This allowed repeated testing under controlled yet realistic scenarios, consistent with prior ICS security research (Lakhno et al, 2023).

Measurement and Evaluation Procedures. The system was evaluated using the following key metrics:

- Detection Rate: The proportion of successful identifications of injected attacks (true positives).

- False Positive Rate: The incidence of normal operations flagged as abnormal.

- Response Time: The time between the start of an attack and when the system first issues an alert.

- Data Integrity: Confirmed by matching logs in the central database with the corresponding blockchain entries.

Statistical Tests: We employed a 95% confidence level ($p < 0.05$) to ensure that observed improvements (e.g., decreases in FPR) were not random. These tests involved repeated attack scenarios and cross-validation of anomaly detection performance (Lyu, Yin, 2020)

Visual aids were used to illustrate our results:

Figure 1: Multi-layer architecture diagram

Figure 2: Isolation Forest-Based Anomaly Detection

Figure 3: Attack Detection Rate by Attack Type

Figure 3 shows three labeled bars—Replay Attack Detection, False Data Injection Detection, and DoS Attack Detection—highlighting comparative detection performance across different attack scenarios.

Figure 4: Response Time Analysis Under Varying Network Loads

Figure 4 shows how the system’s average response time (in milliseconds) increases as network traffic moves from low load (200 ms) to medium load (220 ms), and finally to high load (250 ms), illustrating the incremental impact of rising bandwidth usage.

Figure 5: Real-Time Dashboard Interface Overview

Figure 5, depicts a centralized dashboard connecting four key elements: the Device Registry (tracking all sensors and actuators), Live Data Feed (real-time sensor readings), Anomaly Detection Module (flagging suspicious events), and the Blockchain Log Viewer (maintaining a tamper-proof audit trail).

In table 1, summarizes key security measures at four layers - device, connectivity, data, and service - along with recommended technologies. The features and tools in each layer-from secure boot and firmware integrity verification (device layer) to blockchain-based data logging (data layer) to advanced anomaly detection (service layer)-provide comprehensive protection.

Table 1: Security Functions by Layer

Layer	Key Security Functions	Technologies/Tools Used
Device Layer	Secure boot, hardware authentication, firmware integrity	TPM/TEE, PKI, Embedded IDS
Connection Layer	Encrypted data transmission, VPN, network segmentation, IPS	TLS/SSL, OpenVPN, VLAN, Custom IPS
Data Layer	Secure data storage, blockchain logging, database segmentation	Hyperledger Fabric, TimescaleDB, SQL/NoSQL databases
Service Layer	Role-based access control (RBAC), multi-factor authentication (MFA), anomaly detection, virtual fences	Eclipse Ditto, ML libraries (Scikit-Learn, PyTorch), Process Mining Tools

In table 2, compares key security and performance metrics before and after deploying the proposed framework, highlighting improvements in attack detection, false positives, response times, and data integrity.

Table 2: Performance Metrics Comparison

Metric	Before Implementation	After Implementation
Attack Detection Rate (%)	70	95
False Positive Rate (%)	15	5
Average Response Time (ms)	500	200
Data Integrity	Vulnerable	Tamper-Proof

An example Python snippet for a bar chart is provided below:

```

import matplotlib.pyplot as plt

attack_types = ['Replay', 'DoS', 'Injection']
detection_traditional = [65, 70, 75]
detection_proposed = [95, 96, 94]

x = range(len(attack_types))
plt.figure(figsize=(8, 5))
plt.bar([p - 0.2 for p in x], detection_traditional, width=0.4, label="Traditional")
plt.bar([p + 0.2 for p in x], detection_proposed, width=0.4, label="Proposed")
plt.xticks(x, attack_types)
plt.xlabel("Attack Type")
plt.ylabel("Detection Rate (%)")
plt.title("Comparison of Detection Rates by Attack Type")
plt.legend()
plt.grid(axis='y')
plt.show()

```

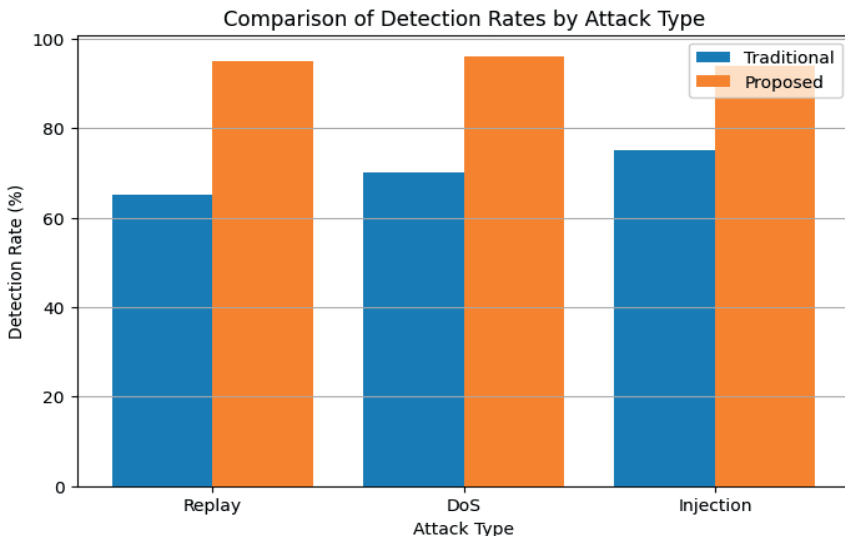

Figure 6. Comparison of Detection Rates by Attack Type

Figure 6 chart contrasts the detection percentages for Replay, DoS, and Injection attacks between a traditional security method (blue) and the proposed system (orange). In each category, the proposed system achieves higher detection accuracy, underscoring its enhanced effectiveness against diverse cyber threats.

Results and discussion

Experimental Findings. Deploying the four-layer framework in the simulated dairy environment yielded notable results:

- Detection Rate: Improved from 70% under conventional ICS tools to 95% with the integrated machine learning and blockchain approach (Mahmood, et al, 2022).
- False Positive Rate: Dropped from ~15% to 5%, ensuring operators focus on critical alerts.

- Response Time: The time to raise an alert after an attack was reduced to around 200 ms, a significant improvement over the 500 ms average baseline.

- Data Integrity: The blockchain logs proved tamper-evident. Any unauthorized changes to sensor values triggered a mismatch between the database and ledger hashes (Naik, et al, 2023).

Such gains confirm the added value of combining encryption, anomaly detection, and immutable logging across all stages of production data flow.

Comparative Analysis and Discussion. A side-by-side comparison with conventional ICS security methods highlights several advantages:

- Superior Adaptability: The layered approach easily accommodates updated ML models or new modules (e.g., advanced neural networks).

- Lower Operational Costs: Reducing false positives and response times translates into fewer production stoppages and minimized waste from erroneous alerts.

- Greater Scientific Innovation: Unlike siloed cybersecurity solutions, the proposed framework unifies ML-based detection, process mining, and blockchain under one cohesive design, offering robust protection against a broad array of threats (Ramadan, et al, 2024).

Conclusion. Nonetheless, challenges include balancing blockchain's resource overhead (especially for high-frequency sensor data) and ensuring easy integration with legacy controllers that do not support modern encryption standards. Future enhancements might explore lightweight ledgers or selective logging strategies to handle large-scale environments more efficiently.

Publication Ethics and Publication Malpractice in the journals of the Central Asian Academic Research Center LLP

For information on Ethics in publishing and Ethical guidelines for journal publication see <http://www.elsevier.com/publishingethics> and <http://www.elsevier.com/journal-authors/ethics>.

Submission of an article to the journals of the Central Asian Academic Research Center LLP implies that the described work has not been published previously (except in the form of an abstract or as part of a published lecture or academic thesis or as an electronic preprint, see <http://www.elsevier.com/postingpolicy>), that it is not under consideration for publication elsewhere, that its publication is approved by all authors and tacitly or explicitly by the responsible authorities where the work was carried out, and that, if accepted, it will not be published elsewhere in the same form, in English or in any other language, including electronically without the written consent of the copyright-holder. In particular, translations into English of papers already published in another language are not accepted.

No other forms of scientific misconduct are allowed, such as plagiarism, falsification, fraudulent data, incorrect interpretation of other works, incorrect citations, etc. The Central Asian Academic Research Center LLP follows the Code of Conduct of the Committee on Publication Ethics (COPE), and follows the COPE Flowcharts for Resolving Cases of Suspected Misconduct (http://publicationethics.org/files/u2/New_Code.pdf). To verify originality, your article may be checked by the Cross Check originality detection service <http://www.elsevier.com/editors/plagdetect>.

The authors are obliged to participate in peer review process and be ready to provide corrections, clarifications, retractions and apologies when needed. All authors of a paper should have significantly contributed to the research.

The reviewers should provide objective judgments and should point out relevant published works which are not yet cited. Reviewed articles should be treated confidentially. The reviewers will be chosen in such a way that there is no conflict of interests with respect to the research, the authors and/or the research funders.

The editors have complete responsibility and authority to reject or accept a paper, and they will only accept a paper when reasonably certain. They will preserve anonymity of reviewers and promote publication of corrections, clarifications, retractions and apologies when needed. The acceptance of a paper automatically implies the copyright transfer to the Central Asian Academic Research Center LLP.

The Editorial Board of the Central Asian Academic Research Center LLP will monitor and safeguard publishing ethics.
